## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- ✓ TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

**What is claimed is:**

- 1           1.     A method in a system using commands, said method comprising:  
2                 selecting a sequence of at least one remote control command and at least one user  
3     interface command; and  
4                 assigning the sequence of commands to at least one user interface element.
  
- 1           2.     The method, as recited in claim 1, wherein the user interface element is a  
2     graphical user interface element.
  
- 1           3.     The method, as recited in claim 1, wherein the user interface element is an input  
2     device element.
  
- 1           4.     The method, as recited in claim 1, wherein the user interface command is a  
2     graphical user interface command.
  
- 1           5.     The method, as recited in claim 1, wherein said selecting step includes selecting  
2     the commands from an input source.
  
- 1           6.     The method, as recited in claim 1, further comprising monitoring the selection of  
2     the sequence of remote control and user interface commands.
  
- 1           7.     The method, as recited in claim 6, further comprising identifying the sequence of  
2     commands from said monitoring step which meets or exceeds a predetermined  
3     acceptance criteria.

1        8.     The method, as recited in claim 1, wherein said assigning step includes prompting  
2        a user to assign the sequence of commands to the at least one user interface element if the  
3        sequence of commands meets or exceeds a predetermined acceptance criteria.

1        9.     A convergence system comprising:  
2             at least one processor;  
3             memory operably associated with said processor;  
4             at least one remote control device for selecting at least one remote control  
5        command;  
6             at least one user interface configured to input at least one user interface command;  
7             a program of instructions configured to be executed by said processor and stored  
8        in said memory, said program including instructions configured to:  
9             select a sequence of at least one remote control command and at least one user  
10       interface command; and  
11            assign the sequence of commands to at least one user interface element.

1        10.    The system, as recited in claim 9, wherein the user interface element is a graphical  
2        user interface element.

1        11.    The system, as recited in claim 9, wherein the user interface element is an input  
2        device element.

1        12.    The system, as recited in claim 9, wherein the user interface command is a  
2        graphical user interface command.

1 13. The system, as recited in claim 9, wherein said select includes select the  
2 commands from an input source.

1 14. The system, as recited in claim 9, further comprises monitoring the selection of  
2 the sequence of remote control and user interface commands.

1 15. The system, as recited in claim 14, further comprises identify the sequence of  
2 commands from said monitor which meets or exceeds a predetermined acceptance  
3 criteria.

1 16. The system, as recited in claim 9, wherein said assigning includes prompting a  
2 user to assign the sequence of commands to the at least one user interface element if the  
3 sequence of commands meets or exceeds a predetermined acceptance criteria.

1 17. A graphical user interface (GUI) comprising:  
2 means for selecting a sequence of at least one remote control command and at  
3 least one user interface command; and  
4 means for assigning the sequence of commands to at least one user interface  
5 element.

1 18. The GUI, as recited in claim 17, wherein the user interface element is an input  
2 device element.

1 19. A computer readable medium tangibly embodying a program of instructions, the  
2 program of instructions implementing the method of:

3 selecting a sequence of at least one remote control command and at least one user  
4 interface command; and

5 assigning the sequence of commands to at least one user interface element.

1 20. The computer readable medium, as recited in claim 19, wherein the user interface  
2 element is a graphical user interface element.

1 21. The computer readable medium, as recited in claim 19, wherein the user interface  
2 element is an input device element.

1 22. The computer readable medium, as recited in claim 19, further comprising  
2 monitoring the selection of the sequence of remote control and user interface commands.

1 23. The computer readable medium, as recited in claim 22, further comprising  
2 identifying the sequence of commands from the monitoring step which meets or exceeds  
3 a predetermined acceptance criteria.

1 24. The computer readable medium, as recited in claim 19, wherein the assigning step  
2 includes prompting a user to assign the sequence of commands to the at least one user  
3 interface element if the sequence of commands meets or exceeds a predetermined  
4 acceptance criteria.

1 25. A signal embodied in a propagation medium, said signal comprising:

2           at least one instruction configured to select a sequence of at least one remote  
3 control command and at least one user interface command; and  
4           at least one instruction configured to assign the sequence of commands to at least  
5 one user interface element.

1       26.   The signal, as recited in claim 25, wherein the user interface element is a  
2 graphical user interface element.

1       27.   The signal, as recited in claim 25, wherein the user interface element is an input  
2 device element.
